Backend-focused Software Engineer with 7+ years of experience in architecting resilient, distributed systems and high-throughput microservices. Proven track record in scaling infrastructure and optimizing data pipelines for real-world production environments.

EXPERIENCE

Neahtid — *Software Engineer*

OCTOBER 2021 - SEPTEMBER 2022

- Architected high-performance RESTful APIs and relational schemas for multi-tenant applications.
- Led a junior team, defining architectural best practices and conducting code reviews that improved velocity and code quality.

VivaSoft Limited — *Software Engineer*

JANUARY 2020 - FEBRUARY 2021

- Engineered microservices for a large-scale educational platform (Campus.com), developing reusable internal libraries and CLI tools that streamlined development workflows.
- Led a cross-functional team in developing an automated IoT-driven vertical gardening system (Grönska), architecting a custom high-performance REST framework that optimized API response times by ~20% for real-time sensor data telemetry.

Jobike Limited — *Software Engineer*

JUNE 2018 - MARCH 2019

- Architected a real-time management infrastructure for a large-scale bike-sharing fleet, enabling efficient asset tracking and user operations.
- Engineered a high-throughput, queue-based SMS authentication system, ensuring reliable user onboarding at scale.
- Designed microservices for mobile banking integration (bKash), ensuring secure and idempotent transaction reconciliation.

GoBD — *Software Engineer*

JULY 2015 - JANUARY 2017

- Architected low-latency monitoring and broadcasting services (BuzzCat) for real-time package and transit tracking.
- Developed a Vehicle Tracker using Raspberry Pi, providing real-time public transit data.
- Built an automated server-health alerting engine using systemd, significantly reducing infrastructure downtime.

EDUCATION

American International University-Bangladesh

BSc. in Computer Science and Engineering - *(APRIL 2011 - JANUARY 2016)*

PROJECTS

- **gitman**: High-performance CLI engine for syncing 60GB+ of local repos. Implemented recursive traversal and robust error handling for reliable, automated updates.
- **dev**: Infrastructure-as-code suite to standardize Linux dev environments. Modular design ensures idempotent, reproducible setups and reduced manual config time.

SKILLS

Languages: Python (Expert), Go, TypeScript, JavaScript

Backend & Data: Django (Expert), FastAPI, PostgreSQL, Redis, RESTful API Design, Schema Design, ETL

Infrastructure: AWS (EC2, ECS, Auto-scaling), Docker, Linux, CI/CD, Monitoring & Alerting.

Engineering Core: Microservices, System Architecture, Performance Optimization, Distributed Systems.

Additional Exposure: Java (Spring), Rust, MongoDB, Elasticsearch, GraphQL.

ACTIVITIES

Participated in the
ACM ICPC Dhaka Regionals

- In **2013,** with the team ***Algorithm_The_Podokkhep***
- and in **2014** with team ***MangoBar***.
- Participated in **NCPC 2014** with team ***_fatalError***

INTERESTS

- Music / Playing Guitar
- Travelling / Hiking
- Electronics projects
- Painting and Sketching
